## SUMMARY

---

Software Engineer with 4 years of experience, specializing in Java and Kotlin. As a member of the B2B team in Marketplace dedicated to enhancing services for both customers and sellers, I developed software solutions to improve platform interactions, streamline processes, and elevate overall user satisfaction.

I like drinking tea, playing the drums, and both watching and playing basketball.

## EXPERIENCE

---

### Yandex

*Software Engineer*

April 2021 - Present

*Moscow, Belgrade*

- Worked in Yandex Market (Marketplace) B2B team. Developed and implemented features to improve service quality for sellers and customers of the marketplace. Took major roles in multiple projects.
- Implemented compliance and quality controls in customer–seller communication channels. As a result, identified many partners with issues (250 in a short period).
- Increased seller onboarding and boosted the success rate from 65% to 85–90%, adding 500 partners weekly without compromising order quality.
- Reduced the outflow of sellers, contributing an additional 0.5% to GMV (Gross Merchandise Value) growth.
- Led to more reliable, high-performing microservices. For example, found and fixed a problem in a service that helped reduce database load (CPU) and cut service response time by half.

## EDUCATION

---

### Higher School of Economics, Faculty of Computer Science

*Bachelor of Science in Software Engineering*

September 2018 - July 2022

*Moscow, Russia*

**Graduate Projects:** Business Processes Automation App Using BPM Technologies

**GPA:** 7.57/10

## TECHNICAL STRENGTHS

---

### Computer Languages

Java, Kotlin (Spring Framework, Gradle, JUnit, Mockito, AssertJ)

### Databases

PostgreSQL, Clickhouse

### Other Tools

AWS, Apache Kafka, Docker, Unix, Git

## LANGUAGES

---

### Russian

Native

### English

Upper intermediate
